Launched the world's first long distance network...and today supports the needs of multinational corporations with 2,500 points of presence in 60 countries.

Created the first electronic speech synthesizer...and today enables businesses to leverage text-to-speech technology in multiple languages.

Continues to transform the way businesses communicate and make substantial investments for the future.

Invented telephotography to send the first fax...and today transports 2,175 trillion bytes of data on an average business day, consistently.

Developed the Unix platform...and today dedicates 50% of research and development budget for innovating and improving the customer experience.

Forward-thinking. Always moving forward.

Today your business can be in more places at once, connecting your entire supply chain from end to end. If it wasn't for communications technologies, global reach would be nothing but a dream. We've invested nearly \$35 billion to help make it a reality for our customers.
